PROJECT

Greenhouse Monitoring and Controlling System Using IoT | C++ | NodeMCU [[Link](#)]

- Enhanced plant growth and yield by creating a smart system that optimizes greenhouse conditions through sensors monitoring environmental factors and actuators maintaining ideal conditions, with real-time data, remote control, and alerts provided via a mobile app.

Autonomous car [[Link](#)]

C++ | Arduino

- Enabled precise path following by developing an autonomous line follower robot using infrared sensors and control algorithms, resulting in a functional and efficient system for navigating predefined paths.
